TECHNICAL SKILLS

Languages
Java, JavaScript, SQL, Python, PHP, HTML/CSS

Backend & APIs
Node.js, Express, REST APIs, JWT auth, MVC

Databases
MySQL, JDBC, phpMyAdmin

Data & Pipelines
ETL, NOAA/Census/USCG ingestion, pandas

Cloud & DevOps
Docker, DigitalOcean, GitHub Actions CI/CD, Git

AI & LLM
Claude Code, Anthropic Claude API, LLM evaluation, prompt engineering

EDUCATION

Rasmussen University
B.S., Computer Science (Expected Sept 2026)

Golden Gate University
B.A., Business Management (2020)

American Military University
A.A., General Studies (2018)

CERTIFICATIONS

Active DoD TS/SCI clearance
CompTIA Security+ CE (2020)
Florida Real Estate License (2022)
DoD/USAF analytic training (Geospatial, DCGS, SAR)

MARK TYNDALL

Software Developer | USMC Veteran | Founder, TrueHull LLC

PROFESSIONAL SUMMARY

Software developer and U.S. Marine Corps veteran with an active DoD TS/SCI clearance, applying a decade of mission-critical leadership to full-stack and data engineering. Founder of TrueHull LLC — a Node.js/Express + MySQL web app with Stripe payments and NOAA/Census/USCG data pipelines, deployed on Docker/DigitalOcean with CI/CD. Previously integrated and tested an AI/ML intelligence platform for the DoD. Completing a B.S. in Computer Science (Sept 2026) and seeking a full-time remote software developer role.

EXPERIENCE

Founder & Software Developer May 2026 – Present
TrueHull LLC — Remote

- Designed and built the entire application end to end — REST API, data model, frontend, security, and deployment — as the sole developer.
- Built a Node.js/Express REST API on a normalized MySQL schema (reports, users, sessions, credit ledger, payments) with parameterized queries and purpose-built indexes.
- Implemented secure auth and account management — JWT sessions, bcrypt password hashing, email verification, and password reset — plus Stripe Checkout with webhook signature verification and an idempotent, append-only credit/voucher ledger.
- Containerized with Docker/Compose and deployed to DigitalOcean App Platform with managed MySQL (TLS), GitHub Actions CI/CD, health checks, and automated nightly backups.

Field Service Representative (Site Lead, Mission Integration) Dec 2018 – Apr 2021
ECS Federal LLC — Beale AFB, CA

- Served as on-site technical lead integrating the Palantir Maven Smart System — an AI/ML intelligence platform — into 24/7 classified intelligence operations.
- Acted as primary technical liaison between operational analysts, government stakeholders, and the software engineering teams building the platform: tested software, reproduced and documented defects, and fed bug reports and feature requests into the engineering backlog.
- Evaluated emerging AI/ML and computer-vision technologies and briefed findings to senior defense leadership, including the OUSD(I) Algorithmic Warfare Cross-Functional Team (Project Maven).

Senior Consultant — Geospatial / FMV Analyst Jun 2017 – Dec 2018
Booz Allen Hamilton — Beale AFB, CA

- Exploited and analyzed UAS full-motion video and wide-area surveillance data (MQ-9 Reaper, MQ-1 Predator) supporting U.S. Central Command operations, producing daily intelligence products for multiple mission customers.
- Collaborated with mission-support technicians to troubleshoot hardware, software, and database issues; performed pattern-of-life analysis and threat identification.

Imagery Analysis Specialist / Sergeant (E-5) 2008 – 2017
United States Marine Corps — Various Locations

- Progressed from infantry Marine to Imagery / Full-Motion-Video Intelligence Analyst over nine years of service; led and mentored analyst teams.
- As Senior Watch Chief (Afghanistan), supervised a 10-person watch team, logged 7,000+ operational events, and maintained accountability of \$104M in classified equipment.

PROJECTS

Gulf Coast HVAC Inventory Management System (Java, MySQL)
Java/MySQL app with role-based access control, DAO and Singleton patterns, and atomic transactional stock adjustments with audit logging (parameterized JDBC).

Gulf Coast HVAC Store (PHP, MySQL, Docker)
Full-stack PHP/MySQL e-commerce app with session auth, catalog, cart, and checkout; Dockerized (PHP/MySQL/phpMyAdmin), Bootstrap UI.

Air Quality Data Analysis (Python, pandas, Jupyter)
Cleaned, transformed, and analyzed the UCI Air Quality dataset with pandas in Jupyter — missing-value handling, type conversion, and exploratory analysis.

Personal Portfolio Website (HTML, CSS, JavaScript)
Responsive single-page portfolio with scroll-spy navigation, project modals, and a photo carousel.
