

MARK TYNDALL

Software Developer | U.S. Marine Corps Veteran | Founder, TrueHull LLC

Cape Coral, FL (Open to Remote) • 239-233-3349 • Tyndall5818@gmail.com • mtyndall88.github.io • linkedin.com/in/mark-tyndall • github.com/mtyndall88

PROFESSIONAL SUMMARY

Software developer and U.S. Marine Corps veteran with an active DoD TS/SCI clearance, applying a decade of mission-critical leadership to full-stack and data engineering. Founder of TrueHull LLC, where I built a web application end to end — a Node.js/Express REST API on MySQL with JWT authentication, Stripe payments, and NOAA/Census/USCG data pipelines, containerized with Docker and deployed on DigitalOcean with CI/CD. Previously integrated and tested an AI/ML intelligence platform (Palantir Maven Smart System) for the DoD, working directly with the engineering teams building it. I pair hands-on development with an AI-assisted engineering workflow I direct and govern. Completing a B.S. in Computer Science (Sept 2026) and seeking a full-time remote software developer role.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, Python, PHP, HTML/CSS

Backend & APIs: Node.js, Express, REST API design, JWT authentication, session management, MVC architecture

Databases: MySQL (schema design, normalization, transactions, indexing, query optimization), JDBC, phpMyAdmin

Data Engineering: ETL / data pipelines, ingestion & transformation (NOAA, U.S. Census, USCG), pandas, data validation

Cloud & DevOps: Docker, Docker Compose, DigitalOcean, CI/CD (GitHub Actions), Git/GitHub, automated backups, secrets management

Testing & Security: Automated / regression testing, debugging, code review; scrypt hashing, parameterized queries, rate limiting

AI & LLM: Claude Code / agentic development, Anthropic Claude API, LLM data labeling & evaluation, prompt engineering

Practices & Tools: SDLC, Agile/Scrum, Jira, OOP, design patterns (DAO, Singleton, MVC), responsive design (Bootstrap), WCAG

EXPERIENCE

Founder & Software Developer

May 2026 – Present

TrueHull LLC — Remote

- Designed and built the entire application end to end — REST API, data model, frontend, security, and deployment — as the sole developer.
- Built a Node.js/Express REST API on a normalized MySQL schema (reports, users, sessions, credit ledger, payments) with parameterized queries and purpose-built indexes.
- Implemented secure auth and account management — JWT sessions, scrypt password hashing, email verification, and password reset — plus Stripe Checkout with webhook signature verification and an idempotent, append-only credit/voucher ledger.
- Containerized with Docker/Compose and deployed to DigitalOcean App Platform with managed MySQL (TLS), GitHub Actions CI/CD, health checks, and automated nightly backups.
- Built data pipelines that ingest and transform NOAA/NHC storm-track, U.S. Census, and USCG data to power a rule-based storm-exposure and risk-scoring engine with guidance across all 50 states and DC.
- Maintain a 993-test automated suite and an adversarial claims-audit and feature-flag process so no user-facing claim ships ahead of the code; built an LLM data-labeling pipeline on the Anthropic Claude Batch API (1,500-note independently audited dataset) to measure and tune the risk engine.
- Drive development with an AI-assisted, agentic workflow (Claude Code) across roughly 70% of 590+ commits, while personally owning requirements, architecture, code review, testing, and every final implementation decision.

Field Service Representative (Site Lead, Mission Integration)

Dec 2018 – Apr 2021

ECS Federal LLC — Beale AFB, CA

- Served as on-site technical lead integrating the Palantir Maven Smart System — an AI/ML intelligence platform — into 24/7 classified intelligence operations.
- Acted as primary technical liaison between operational analysts, government stakeholders, and the software engineering teams building the platform: tested software, reproduced and documented defects, and fed bug reports and feature requests into the engineering backlog.
- Evaluated emerging AI/ML and computer-vision technologies and briefed findings to senior defense leadership, including the OUSD(I) Algorithmic Warfare Cross-Functional Team (Project Maven).

- Designed and delivered a two-week training course on the platform's Wide-Area Motion Imagery (WAMI) capability, enabling analysts to test the system and provide structured development feedback.
- Provided Tier 1 / Tier 2 support — monitored performance, triaged incidents, generated trouble tickets, and supported secure configuration, patching, and version control.

Senior Consultant — Geospatial / FMV Analyst

Jun 2017 – Dec 2018

Booz Allen Hamilton — Beale AFB, CA

- Exploited and analyzed UAS full-motion video and wide-area surveillance data (MQ-9 Reaper, MQ-1 Predator) supporting U.S. Central Command operations, producing daily intelligence products for multiple mission customers.
- Collaborated with mission-support technicians to troubleshoot hardware, software, and database issues; performed pattern-of-life analysis and threat identification.

Imagery Analysis Specialist / Sergeant (E-5)

2008 – 2017

United States Marine Corps — Various Locations

- Progressed from infantry Marine to Imagery / Full-Motion-Video Intelligence Analyst over nine years of service; led and mentored analyst teams.
- As Senior Watch Chief (Afghanistan), supervised a 10-person watch team, logged 7,000+ operational events, and maintained accountability of \$104M in classified equipment.
- As Training NCO, built 13 training programs and scheduled professional military education for 3,000+ personnel.
- Installed, maintained, and updated exploitation systems (TEG-RWS, TIPS); troubleshoot system issues and tracked work orders.

PROJECTS

Gulf Coast HVAC Inventory Management System (Java, MySQL)

Java 21 application over a normalized MySQL database with role-based access control (admin/user/viewer), DAO and Singleton patterns, and regex-validated authentication; atomic, transactional stock adjustments with full audit logging, invoice management, and low-stock reporting over parameterized JDBC.

Gulf Coast HVAC Store (PHP, MySQL, Docker)

Full-stack PHP/MySQL e-commerce web app with session-based authentication, product catalog, shopping cart, and checkout; containerized with Docker Compose (PHP, MySQL, phpMyAdmin) and styled with Bootstrap.

Air Quality Data Analysis (Python, pandas, Jupyter)

Cleaned, transformed, and analyzed the UCI Air Quality dataset in a Jupyter notebook with pandas — handling missing values and type conversions and producing exploratory analysis.

Personal Portfolio Website (HTML, CSS, JavaScript)

Responsive single-page portfolio with scroll-spy navigation, project modals, and a photo carousel.

ADDITIONAL EXPERIENCE

Real Estate Associate — Rossman Realty, Cape Coral, FL

Jan 2023 – Present

Coordinate complex real-estate transactions and documentation across multiple stakeholders while completing a B.S. in Computer Science and building TrueHull.

HVAC Installation Technician (Part-Time) — Southwest Florida

2021 – Present

Perform part-time residential and commercial HVAC installation, applying hands-on troubleshooting and jobsite problem-solving alongside full-time study and software development.

EDUCATION

Rasmussen University — B.S., Computer Science (Expected Sept 2026)

Golden Gate University — B.A., Business Management (2020)

American Military University — A.A., General Studies (2018)

Relevant coursework: data structures & algorithms, databases, object-oriented programming, web development, software engineering.

CERTIFICATIONS, TRAINING & CLEARANCE

- Active DoD TS/SCI security clearance
- CompTIA Security+ CE (2020, inactive)
- Florida Real Estate License (2022)
- DoD/USAF technical & analytic training: Geospatial Analyst Certification, Gorgon Stare, DCGS Qualification, Basic Synthetic Aperture Radar (MCIA), Marine Corps Tactical Imagery Analysis Course (NGA), Air Force Instructor Qualification
